GORLA HEMANTH KUMAR

DATA ANALYST

Andhra Pradesh, India | +91 8688271553 | hemanthkumar5981@gmail.com | **github.com/Hemanth-530**

PROFESSIONAL SUMMARY

Entry-level Data Analyst and 2025 Computer Science graduate with hands-on project experience in SQL, Python, Excel and Power BI. Skilled in cleaning and validating large datasets, exploratory data analysis, KPI reporting, statistical analysis and dashboard development using Pandas, NumPy, Power Query and DAX.

TECHNICAL SKILLS

Analytics & Programming: Python, SQL, Pandas, NumPy, OpenPyXL, data cleaning, data validation, EDA, ETL, KPI analysis, statistical analysis

Excel & Business Intelligence: Microsoft Excel, PivotTables, XLOOKUP, INDEX-MATCH, charts, Power Query, Power BI, DAX, dashboard development

Databases & Visualization: SQLite, MySQL, Matplotlib, Seaborn, SQL queries, joins, aggregations and data visualization

Development Tools: Git, GitHub, VS Code, Jupyter Notebook

Core Strengths: Business reporting, dashboard design, data quality, actionable insights, analytical thinking and problem solving

PROJECTS

Mandi Price Intelligence | Python, Pandas, SQLite, SQL, Power BI | **GitHub** | **Live Dashboard**

- Cleaned and validated 1,000,000 agricultural price records covering 50 crops, 20 markets and 18 states from 2022 to 2025, with zero duplicate rows and zero missing required analytical fields.
- Built a reusable Pandas cleaning pipeline and SQLite analytical layer; wrote SQL queries for monthly seasonality, inter-market price spreads, crop volatility and market comparisons.
- Created Power BI-ready datasets and an interactive dashboard to track price trends, compare crops and markets, and communicate findings through KPIs, charts and filters.

UPI Deep-Dive Analytics | Python, Pandas, SQL, SQLite, Power BI | **GitHub** | **Live Dashboard**

- Built a reproducible Python and SQLite analytics workflow using a 5,000,000-row synthetic dataset calibrated to official NPCI monthly aggregates across 36 months, 8 UPI apps and 10 banks.
- Cleaned and standardized dates, apps, banks, transaction types, statuses, merchant categories and regional attributes; validated missing values, duplicates, data types and aggregate reconciliation.
- Wrote SQL analyses for transaction volume and value trends, average ticket size, app market share, approval rates, business and technical decline rates, and bank rankings.
- Created Power BI-ready reporting datasets, KPI views and visualizations for app performance, bank reliability and success/failure trends, with documented limitations and reproducible steps.

EDUCATION

B.Tech - Computer Science and Engineering | Prakasam Engineering College, JNTU Kakinada | 2021-2025 | CGPA: 7.1/10

Intermediate | NRI Junior College | 2019-2021 | 70%

SSC | Kijiji High School, Darsi | 2019 | GPA: 9.3/10

CERTIFICATION

Data Analytics Course | Python, SQL, Microsoft Excel and Power BI
